Package we_app Classes

Class we_app_Application

class for webEdition applications (formerly known as "tools")

- **Static**
- **Access** public

object SimpleXMLElement

```
string function we_app_Common::getAppTOCElement([$appname = ""], [$Selement = ""])  
[line 345]
```

Function Parameters:

string **\$appname** name of the application

string **\$Selement** name of the requested element

fetches the value of a specified application's toc entry element

468]

Function Parameters:

- **\$appname**
- **\$attribute**

\$source

reads the manifest file via SimpleXML from a specified path (absolute path)

- **\$attribute**

- **Package** we_app
- **Copyright**

- **Access** public

bool function we_app_Hook::addReader([&\$reader = null]) *[line 71]*

Function Parameters:

- **&\$reader**

- **Access** public

void function we_app_Hook::loadAll() *[line 87]*

loads all hooks from all registered readers

Access

•

- **Var** object for general application handling configuration
- **Access**

- **Var** source, either path or application name

void

void function we_app_Installer::_postInstall() *[line 739]*
things to do after a successfull installation

void function we_app_Installer::_removeInstallationFiles() *[line 551]*

Class we_app_Model

[line 28]

Base class for app models

- **Package** we_app
- **Copyright** Copyright (c) 2008 living-e AG (<http://www.living-e.com>)

boolean = [line 71]

IsFolder attribute

- **Access** public

we_app_Model::\$ParentID

integer = 0 [line 50]

ParentID attribute

void function we_app_Model::deleteChilds() *[line 263]*
delete childs

- **Access public**

boolean function we_app_Model::filenameNotValid() *[line 105]*
validates the Text

boolean

- *string* **\$oldpath**

update the child paths

- **Access** public

we_app_TopFrameView::kEditorFrameset

void function we_util_File::loadPart(\$filename, [\$offset = 0], [\$rsize = 8192], [\$iscompressed = 0]) *[line 88]*

Function Parameters:

• **\$filename**

• **\$offset**

`void function we_util_File::renameFile($old, $new) [line 600]`

Function Parameters:

- **\$old**
- **\$new**

- **Deprecated** since - 05.06.2011 1f (sin00 586.01 w 0 J7 () 26ov)

void function we_util_File::saveFile(\$file_name, [\$sourceCode = ""]) *[line 442]*

Function Parameters:

- **\$file_name**
- **\$sourceCode**

- **Static**
- **Access** public

void function we_util_File::saveTemp(\$content, [\$filename529.20c 11.496 c 111.392Td ET BT 65.000 695.760 695.760 695.7A

- **Static**

Class we_util_Path

[line 24]

Utility class for path manipulation and creation

Converts a given path to an id

string function we_util_Strings::createUniqueld([\$length = 32]) *[line 33]*

Function Parameters:

Function Parameters:

- **\$class**

- **\$values**
